

Carbon Fee and Dividend is a revenue-neutral price on carbon that functions as follows:

- A fee is placed on carbon-based fuels at the source
- This fee increases steadily each year
- All of the money collected is returned to Canadians on an equitable basis
- Under this plan most Canadian households would break even or receive more in their dividend check than they would pay for the increased cost of energy, thereby protecting the poor and middle class.
- A predictably increasing carbon price will send a clear market signal which will unleash entrepreneurs and investors in the new clean-energy economy.

NAME:

ADDRESS:

Carbon fee & dividend: good for the economy & climate
without growing government
